# Shader Editor - Header

The Header contains various menus, navigation elements, settings and tools for the viewport. This content differs, dependant of the sub mode. And the content of the menus may differ too, dependant of the chosen renderer.

The header is divided into two areas. Left mode and menus. Right settings.

# Header right click menus

The general right click menu functionality is explained in chapter 6 Editors introduction.

# Editortype Menu

Bforartist is made of several editor types. Headers can display a menu where you can switch to other editor types.

This menu is hidden by default. It is meant to edit the layouts, and should not be necessary for regular work. You can reveal it in the header right click menu.

# Sub Modes

The Shader Editor has three shader type sub modes. Every sub mode has some different set of shaders for its own purpose.

## Object

The Object mode is for the scene objects. It shows materials and shader for the scene objects.

## World

In the World mode you can change the shaders and materials for the world settings. It shows the world shaders and materials.

## Line Style

The Line Style mode allows you to set up materials for the Freestyle renderer. Freestyle rendering must be active for this. It shows the Freestyle materials and shaders.
