Node tab - Interface panel

Manage the input and output properties of the Group Input and Group Output nodes.

More than one input slot can be useful when you want to modify the geometry in more than one way.

Inputs / Outputs

List

List of available input or output slots.

Drag handler

Resize the list.

Search

Opens a search field with its options.

Add Node Tree Interface Socket

Adds a new input or output slot to the list.

Sort

Move the selected node up or down in the list.

Name

Change the name of the current selected input slot. Type in a new name and hit enter.

The X button at the end will remove the selected input slot from the list.

Hide Value

Hide the input value even when the socket is not connected.
