## Edit Mode - Text Menu

### Cut

Cuts the selection.

### Copy

Copies the selection.

### Paste

Pastes a copied selection.

### Paste File

Opens the file browser where you can choose a text file to paste the text from. It needs to be UTF8.

### To Uppercase

Sets the selected text to be uppercase letters.

### To Lowercase

Sets the selected text to be lowercase letters.

### Last Operator Set Case

Set Case has one Last Operator for all items.

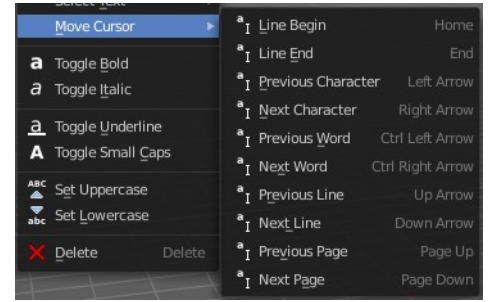

### Special Characters

Special characters is a sub menu that contains some special text characters, like copyright, which you can insert into the text.

## Move Cursor

Set the cursor at specific positions in the text.

## Toggle Bold

Bold sets the selected letters to be displayed as bold letters.

## Toggle Italic

Italic sets the selected letters to be displayed as italic letters.

## Toggle Underline

Underline sets the selected letters to be displayed as underlined letters.

## Toggle Small Caps

Toggle small caps sets the selected letters to be displayed as if they were upper case letters, but with lower case size.

## Kerning

Kerning is the distance between letters. Increase, decrease and reset the kerning.

## Decrease Kerning

Decreases the distance between the letters.

## Increase Kerning

Increases the distance between the letters.

## Reset Kerning

Resets the distance between the letters to the default values from the font.

## Last Operator Change Spacing

### Delta

Adjust the spacing. The range goes from -20 to 20.

## Delete

Deletes the selected text.
