## Animation tab - Pose Library Panel

The Animation tab contains currently the pose library settings.

### Create Pose Asset

This button becomes active with a armature in pose mode. It allows you to insert the current pose into the Asset browser, to reuse it at a later point.

### Copy Pose as Asset

Copy the current pose as an asset, which can then be pasted into an asset library.

### Active Asset Library

Which asset library to use. A custom one, or the built in asset lib. Default is the built-in called Current File.

### List of Asset Poses

The list of available asset poses.

### Search Field

You can expand a search field at the bottom of the list. Type in your term and hit enter to filter for your term.

### Invert

Exclude the search term instead of searching for it.

### Sort by Name

Sort the List by name.
