Brush Panels

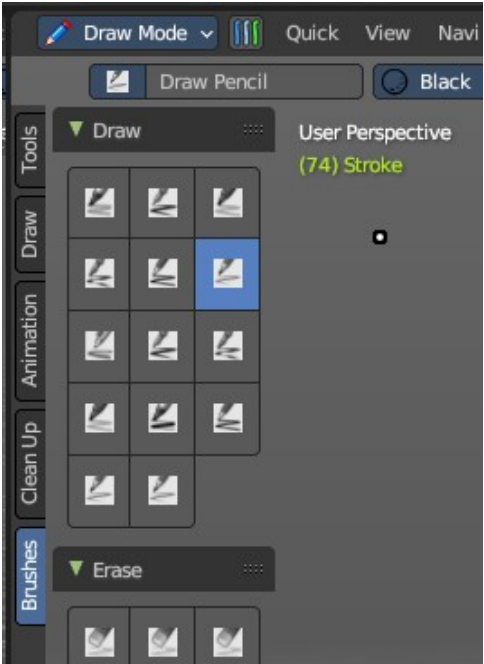

This addon is optional and deactivated by default.

This adds a **Brushes Tab** to most painting and drawing modes and objects. This includes an individual panel per brush operator listing all brush types dynamically, including all user created brushes. This also includes the ability to display custom icons and is responsive per the toolshelf standards.

Note

To activate/deactivate an addon, go to Edit – Preferences – Addons tab – and untick any activated addons.

If you’d like to keep your addons for future use, you can either **save the preferences**, or activate them on demand per workspace in the workspace settings in the property shelf.

Use

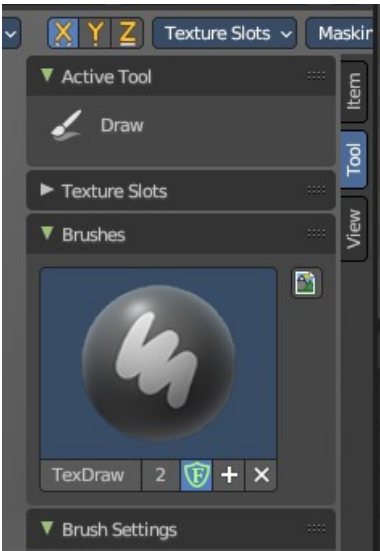

To use, go into a paint mode (**Sculpt**, **Texture Paint**, **Vertex Paint**, **Weight Paint** or **Grease Pencil Draw Mode**), select the Brush tab in the Tool Shelf to the left, and then select a brush. When you select a brush, the button will automatically select the brush operator and select the brush type stored in the brush library. You can link/append and create any new brush type for later use – you can also assign iconography on demand.

If you don’t see the toolshelf tabs, go to View and turn on Tool Shelf Tabs.

To add brushes, you can use the add button in the Property Shelf under the Tool tab or in the Header brush type dropdown, you can add new brushes or remove brushes.

Note

Keep in mind a removed brush is still stored in orphan data till you purge data or save and reload the file. If brush type contains a (fake) user, this brush will

not be purged from the file.

To add icons to brushes, in the Brushes panel in the Tool tab of the Property Shelf, you can use the Custom Icon to load any image as a brush icon.

You can find the Brush tab and panels in the **3D View Editor** or the **Image Editor** with the correct painting modes.

For more information, please refer to the relevant chapters on the painting modes per object type.

Brush Panels and Modes

Mesh Objects

These brush panels are included with all mesh object painting modes.

Sculpt Mode

The Sculpt mode activated from the top left of the 3D View or by hotkey.

Draw

All Draw brush types.

Draw Sharp

All Draw Sharp brush types.

Clay

All Clay brush types.

Clay Strips

All Clay Strips brush types.

Layer

All Layer brush types.

Inflate

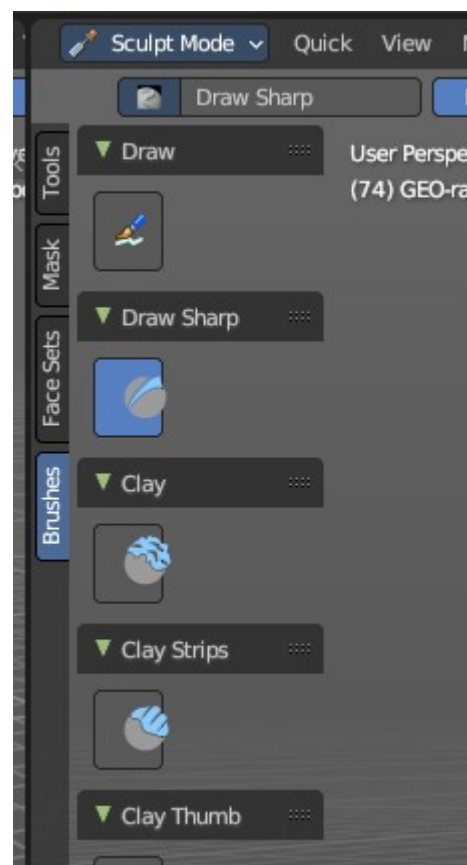

All Inflate brush types.

Blob

All Blob brush types.

Crease
